● Indicates location of borings.

Notice and Disclaimer Regarding Boring Log Data
The locations of all subsurface borings performed by the design-build team for this structure are shown on the plan sheets for this structure. The logs for all locations indicated are provided on Sheets No. B03-25 thru B03-28. Labrotory test results, rock core photographs and other information obtained at these borings are available in the corresponding Foundation Reccommendations Memo prepared by HNTB. By the nature of the exploration process, the information gathered at these borings represents only a small fraction of the total volume of material at the Site. Interpolation between data samples may not be indicative of the nature and extent of the variations that actually exist between sampling locations.

Note: This drawing is not to scale. Follow dimensions.

Design Specifications:
2020 AASHTO LRFD Bridge Design Specifications (9th Ed.) and 2023 AASHTO Guide Specifications for LRFD Seismic Bridge Design (3rd Edition)
Seismic Design Category = A (Nonseismic)
Design earthquake response spectral acceleration coefficient at 1.0 second period, $S_{D1} \leq 0.15$
Acceleration Coefficient (effective peak ground acceleration coefficient), A_S = N/A
2009 AASHTO LRFD Guide Specifications for the Design of Pedestrian Bridges and 2015 Interim Revisions.

Design Loading:
Vehicular = H10 Truck minus lane load
Pedestrian = 90 lb/sf
Future Wearing Surface = 35 lb/sf
Earth - 120 lb/cf
Equivalent Fluid Pressure - 45 lb/cf (Min.)
Superstructure: Simply-Supported, non-composite for dead load.
Continuous composite for live load.

Design Unit Stresses:

Class B Concrete (End Bents below Const. Jt.)	f'c = 3,000 psi
Class B-1 Concrete (Intermediate Bents except Drilled Shafts)	f'c = 4,000 psi
Class B-2 Concrete (Drilled Shafts)	f'c = 4,000 psi
Class B-2 Concrete (Superstructure, except Prestressed Girders, and Pedestrian Curb)	f'c = 4,000 psi
Class B-1 Concrete (Pedestrian Curb)	f'c = 4,000 psi
Reinforcing Steel (ASTM A615 Grade 60)	fy = 60,000 psi
Structural HP Steel Pile (ASTM A709 Grade 50)	fy = 50,000 psi

For prestressed girder stresses, see Sheets No. B03-12 thru B03-13.

Neoprene Pads:
Neoprene Bearing Pads shall be 60 durometer and shall be in accordance with Sec 716.

Joint Filler:
All joint filler shall be in accordance with Sec 1057 for preformed sponge rubber expansion and partition joint filler, except as noted.

Reinforcing Steel:
Minimum clearance to reinforcing steel shall be 1-1/2", unless otherwise shown.

All reinforcing in the pedestrian curb, light blisters, slab, concrete diaphragms, End Bents No. 1 and 5 and Intermediate Bents No. 2, 3 & 4 shall be epoxy coated. Reinforcing in the drilled shaft shall be uncoated.

Concrete Protective Coatings:
Concrete and masonry protective coating shall be applied on bridge wingwall and end face of end bent to a minimum of 18" below finished ground line in accordance with Sec 711.

Sacrificial graffiti protective coating shall be applied on bridge wingwall and end face of end bent to a minimum of 18" below finished ground line in accordance with Sec 711.

Abbreviations:
E.F. denotes Each Face
N.F. denotes Near Face
F.F. denotes Far face
U.N.O. denotes Unless Noted Otherwise

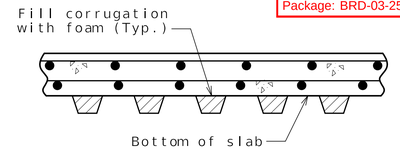
STAY-IN-PLACE
CORRUGATED STEEL FORM DETAIL



SECTION A-A

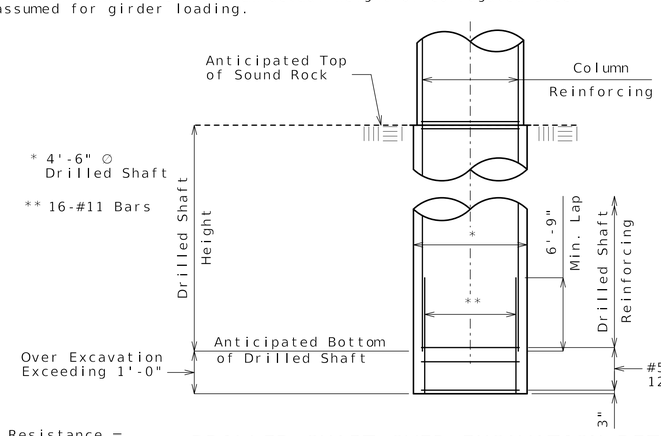
Stay-In-Place Corrugated Steel Form Notes:

Corrugated steel forms, supports, closure elements and accessories shall be in accordance with grade requirement and coating designation G165 of ASTM A653.Complete shop drawings of the permanent steel deck forms shall be required in accordance with Sec 1080.

Corrugations of stay-in-place forms shall be filled with an expanded polystyrene material. The polystyrene material shall be placed in the forms with an adhesive in accordance with the manufacturer's recommendations.

Form sheets shall not rest directly on the top of girder flanges. Sheets shall be securely fastened to form supports with a minimum bearing length of one inch on each end. Form supports shall be placed in direct contact with the flange. Welding on or drilling holes in the girder flanges will not be permitted. All steel fabrication and construction shall be in accordance with Sec 1080 and 712. Certified field welders will not be required for welding of the form supports.

The design of stay-in-place corrugated steel forms is per manufacturer which shall be in accordance with Sec 703 for false work and forms. Maximum actual weight of corrugated steel forms allowed shall be 4 psf assumed for girder loading.



DRILLED SHAFT OVER EXCAVATION DETAIL

For Drilled Shaft Details see Intermediate Bent Details

Load Bearing Piles:
Minimum Nominal Axial Compressive Resistance = Maximum Factored Loads/Resistance Factor
Prebore for piles at End Bent No. 1 to elevation 913.
End Bent No. 1 HP piles are anticipated to be driven to refusal on rock. Review all borings for depth of rock and restrict driving as appropriate to comply with hard rock driving criteria in accordance with Sec 702. When pile refusal on rock occurs, as approved by the engineer, the minimum nominal axial compressive resistance is verified and no additional pile driving verification method is required.
Prebore for piles at End Bent No. 5 to elevation 899.
At End Bent No. 5 verify the bottom of the prebore is clean and contains no loose rubble. Set pile and seat with tap of backhoe bucket or equivalent method. Prebore shall be backfilled with Class B concrete to elevation 904. Backfill remaining length of prebore per Sec 702.
All piles shall be galvanized down to minimum galvanized penetration (elevation).
Pile point reinforcement need not be galvanized. Shop drawings will not be required for pile point reinforcement.
The contractor shall make every effort to achieve the minimum galvanized penetration (elevation) shown on the plans for all piles. Deviations in penetration less than 5 feet of the minimum will be considered acceptable provided the contractor makes the necessary corrections to ensure the minimum penetration is achieved on subsequent piles.
DT = Dynamic Testing

Drilled Shafts:
Minimum Nominal Axial Compressive Resistance (Side Resistance + Tip Resistance) = Maximum Factored Loads/Resistance Factors
Uncased drilled shaft used for constructability. Layer 1 data shown in table is top most layer used for design and may not correspond to top of drilled shaft shown elsewhere in plans.
Sonic logging testing shall be performed on all drilled shafts.
Drilled shafts shall be constructed in accordance with project Drilled Shaft AAS.
* Drilled shaft length for drilled shafts is controlled by lateral design. End bearing not required.
** Top of elevation range corresponds to 18" below future WB I-70 lane construction by others and EB I-70 lane construction with this project at Bents No. 2 and 4, respectively.

BRIDGE APPROACH SLAB DETAIL

(1 required at End Bents No. 1 and 5)

Bridge Approach Slab Notes:

All concrete for bridge approach slab shall be in accordance with Sec 503 (f'c=4,000 psi).

The reinforcing steel in the bridge approach slab shall be epoxy coated Grade 60 with fy=60,000 psi.

The reinforcing steel in the bridge approach slab shall be continuous. The transverse reinforcing steel may be made continuous by providing a minimum lap splice of 23" for #4 bars.

Provide 3/4" joint filler between edge of approach slab and inside vertical face of bridge wingwall. Provide 2" joint filler at end of bridge approach slab adjacent to trail approach. All joint filler shall be in accordance with Sec 1057 for preformed fiber expansion joint filler except as noted.

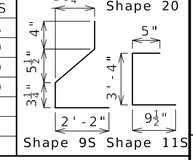
2	4 G5	2'-8"	20

Bending Diagrams



Welded Wire Reinforcement - Each Girder

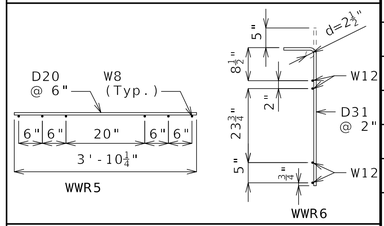


TABLE OF DIMENSIONS

Span No.	Girder No.	Bent No.	A	B	C	D
1-2	1 and 2	1	16½"	---	74	94
1-2	1 and 2	2	11"	9"		
4-5	1 and 2	4	7"	5½"	66	86
4-5	1 and 2	5	20"	---		

All dimensions are out to out.

Hooks and bends shall be in accordance with the CRSI Manual of Standard Practice for Detailing Reinforced Concrete Structures, Stirrup and Tie Dimensions.

Actual bar lengths are measured along centerline of bar to the nearest inch.

Minimum clearance to reinforcing shall be one inch.

All bar reinforcement shall be Grade 60

The two D1 bars may be furnished as one bar at the fabricator's option.

All B1 bars shall be epoxy coated.

Half no. of G3, G4 and G5 not required for ext. girders of end spans.

General Notes:

Concrete for prestressed girders shall be Class A-1 with f'c = 10000 psi and f'ci = 7500 psi.

Use 8 strands, 0.6"Ø Grade 270, with an initial prestress force of 352 kips.

Pretensioned members shall be in accordance with Sec 1029.

Fabricator shall be responsible for location and design of lifting devices.

The contractor shall provide bracing necessary for lateral and torsional stability of the girders during construction of the concrete slab and remove the bracing after the slab has attained 75% design strength. Contractor shall not drill holes in the girders.

For Girder Camber Diagram, see Sheet No. B03-15.

For location of coil ties at concrete diaphragms and integral bents, see Sheets No. B03-05, B03-09 and B03-14.

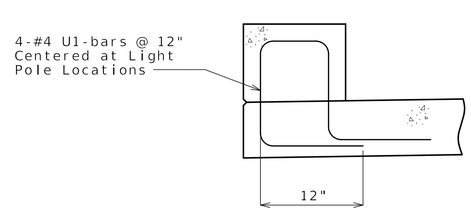
ELEVATION OF PEDESTRIAN CURB

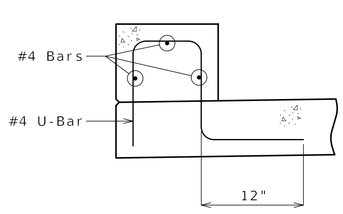
(Left curb shown, right curb similar)
Longitudinal dimensions are horizontal and measured along the outside of slab.

*Right pedestrian curb only.



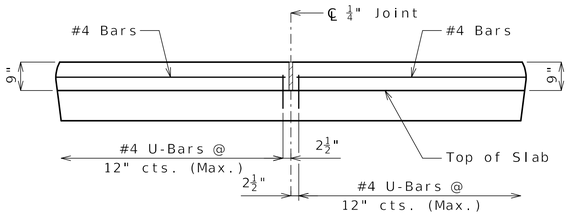
U1-BAR DETAIL AT LIGHT POLE

(At light locations, U1-Bars to be used in lieu of #4 U-bars shown in Section B-B)

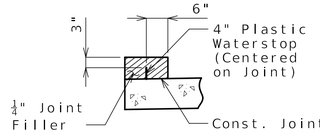


ALTERNATE CURB REINFORCING DETAIL

(Alt for Section B-B shown. alt for Section A-A similar)

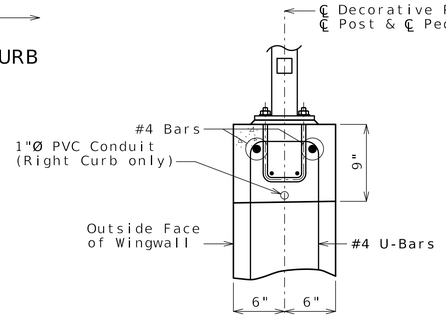


PART ELEVATION OF PEDESTRIAN CURB

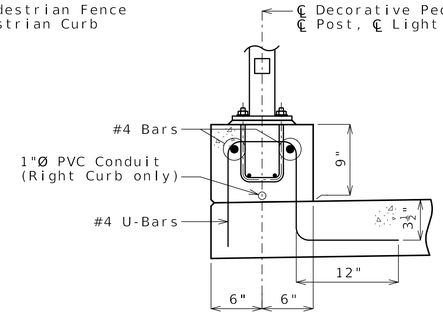


PLASTIC WATERSTOP DETAIL

Plastic waterstop shall be placed in all pedestrian curb filled joints, except structures with superelevation, use on lower joints only.

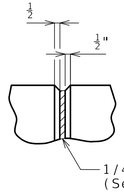


SECTION A-A



SECTION B-B

Use a minimum lap of 2'-7" for #4 horizontal curb bars.



PART ELEVATION AT CURB JOINT

Notes:

Conventional forming shall be used for all pedestrian curb.

Locating and pre-setting fence post u-bolts with tack welded #4 bars prior to slab pour is recommended.

Top of curb shall be built parallel to grade and curb joints (except at end bents) normal to grade.

All exposed edges of pedestrian curb shall have either a 1/2-inch radius or a 3/8-inch bevel, unless otherwise noted.

Concrete in the pedestrian curb shall be Class B-1.

Center of posts shall clear curb joints or ends by at least 6 inches.

Slab reinforcement not shown for clarity.

For details of decorative pedestrian fence not shown, see Sheet No. B03-22.

For details of Decorative Lighting, see Lighting plans.

- For details of pedestrian curb, see Sheet No. B03-20.
- For details of decorative pedestrian fence at light locations, see Sheet No. B03-22.
- Locating and pre-setting u-bolts with tack welded #4 bars prior to slab pour is recommended.
- *Bars can be field cut to place around slab #4-U-bars. In this case, galvanization at cut locations shall be repaired per Sec 1081. Additional #4x18" galvanized bar shall be lapped with each cut bar.
- **Dimensions based on assumed bolt circle of 8 5/8". Contractor shall confirm dimensions with light pole supplier.

Notes:

These details are a general representation of a Decorative Pedestrian Fence. The actual fence components and component positions may be different than what is shown.

Fence shall have a gloss black finish (Federal Standard #17038). See special provisions.

Base plate shall be ASTM A709, Grade 50.

All base plates, U bolts, hex nuts and washers shall be galvanized in accordance with ASTM A123 and Sec 1081.

All fence posts shall be vertical.

Grout shall be placed under the post base plates in accordance with Sec 1066.

Decorative pedestrian fencing shall be in accordance with 2020-AASHTO LRFD Bridge Design Specifications, 9th Ed.

Shop drawings and structural calculations will not be required for the decorative pedestrian fences on the Bridge Pre-qualified Products List.

All materials used in fabrication and construction of the decorative pedestrian fencing shall be in accordance with the manufacturer's specifications, except as modified in the contract documents.

Decorative pedestrian fencing system shall be supplied by only one manufacturer. Decorative pedestrian fencing system shall include all components except the anchor bolts and hardware, and #4 bars welded to the anchor bolts. The assembly of the pickets to the rails and the rails to the posts shall be the same as the style mentioned for the manufacturer.

See Bridge Pre-qualified Products List (BPPL) for a list of approved manufacturers.

Substitution for the U-bolt cages will not be permitted.

U-bolts shall be ASTM F1554 Grade 36.

For details of pedestrian curb, see Sheet No. B03-20.

Longitudinal dimensions of fence are horizontal.

Locating and pre-setting fence post u-bolts with tack welded #4 bars prior to slab pour is recommended.

∗ Bars can be field cut to place around slab #4-U-bars. In this case, galvanization at cut locations shall be repaired per Sec 1081. Additional #4x18" galvanized bar shall be lapped with each cut bar.

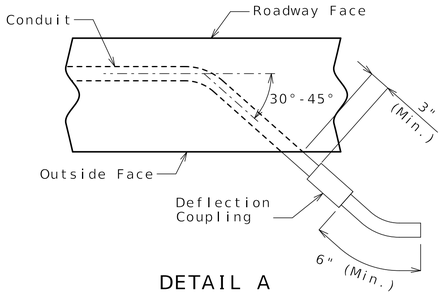
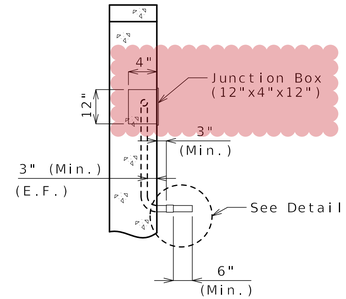
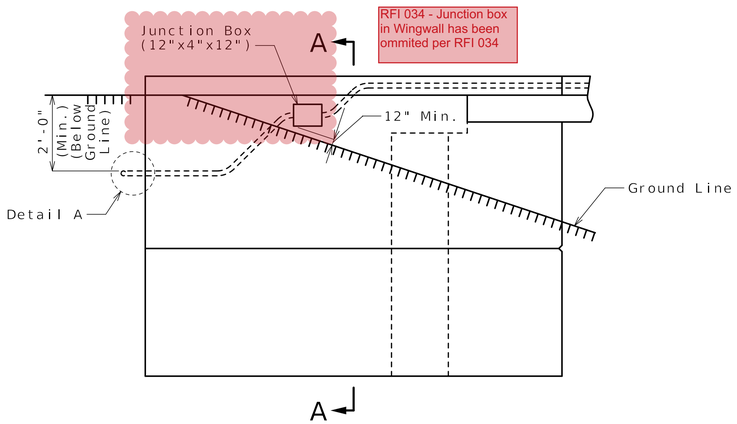
PLAN OF CONDUIT SYSTEM



DETAIL A



PART SECTION A-A



PART WINGWALL ELEVATION

Notes:

All conduit shall be rigid non-metallic schedule 40 heavy wall PVC (polyvinyl chloride plastic) with 3" minimum cover in concrete. Each section of conduit shall bear the Underwriters laboratories (UL) label.

Shift reinforcing steel in field where necessary to clear conduit and junction boxes.

Expansion fittings shall be placed as shown and set in accordance with the manufacturer's requirements and based on the air temperature at the time of setting given an estimated total movement of 1 inch at filled joints using a maximum temperature range of 120°F and a maximum temperature of 110°F.

All end bent junction boxes shall be PVC molded in accordance with Sec. 1062 and designed for flush mounting. The conduit terminations shall be permanent or separable. The terminations and covers shall be of watertight construction and shall meet requirements for NEMA 4X enclosure.

Drainage shall be provided at low points or other critical locations of all conduits and all junction boxes in accordance with Sec 707. All conduits shall be sloped to drain where possible.

SOIL BORING NUMBER: 25Ped_B5_1

Page 1 of 1

PROJECT Improve I 70 KC Design Build
DRILLING FIRM PPI **DRILLER** Josh Starkey
LOGGED BY Cameron Dupont
SURFACE ELEVATION 929.6'
METHOD Auger

NORTHING/EASTING 1061172.1 / 2777809.8
DATE STARTED 12/18/2024
DATE COMPLETED 12/18/2024
RIG TYPE CME-55LC
TOOLING 4-1/2" Continuous Flight Auger

Groundwater Data	
During Drilling (ft):	N/A
After Drilling (ft):	N/A
After __ Hours (ft):	N/A

Depth (ft)	Depth of Sample	Sample Type	Sample ID	Recovery Length (in)	Blow Counts (N-Value)	% Recovery	RQD (%)	Pocket Pen (tsf)	Graphic Log	Visual Classification and Remarks	Lab: Atterberg Limits (LL-PL-PI)	Lab: Moisture Content (%)	Lab: Dry Density (PCF)	Lab: UCS (tsf)
										FILL, dark brown, stiff, high plasticity, moist,				
										FAT CLAY				
										3.0 926.6				
5	4 ft		C-1	18		100	28			Limestone, highly weathered to weathered,				
	5.5 ft		C-2	60		100	63			tan-gray, hard, vuggy, orange sandstone		0.2	160.0	489
10	10.5 ft		C-3	60		100	78			seams throughout				
										- sandstone seams every 4 inches from 8-10'				
										- 3" shale seam, soft, moist at 11.6`		0.4	165.7	934
										13.3 916.4				
15	15.5 ft		C-4	60		100	78			Shale, highly weathered, dark gray, soft,				
										clayey, moist		13.3	126.0	17
20	20.5 ft		C-5	58		97	80			21.5 908.1				
										Limestone, slightly weathered to fresh, gray,		0.4	165.1	1214
25	25.5 ft		C-6	60		100	73			hard, calcareous				
										27.1 902.5				
										27.3 Shale seam (3"), soft, highly weathered 902.3				
										Limestone, slightly weathered, gray, hard,		0.6	166.1	423
30										moist				
										30.5 899.1				
35										Bottom of Boring at 30.5'				
										Boring backfilled with cuttings 12/18/2024				

Released For Construction
Not to Scale
Revision: 0.0
Date: 04/11/2025
Package: BRD-03-25th_ST_PED

Notes:
For locations of borings, see Sheet No. B03-02 and Geotechnical Report.

BORING LOGS

Detailed DEC 2024
Checked JAN 2025

Note: This drawing is not to scale. Follow dimensions.
